Foreword

The NSW Government currently invests around \$330 million each year into the Energy Social Programs. This includes six energy rebates and one crisis support scheme to assist low income and vulnerable households experiencing difficulty paying their energy bills. The Energy Social Programs have the following components:

- Low Income Household Electricity Rebate at \$285 off electricity bills per year
- Low Income Household Gas Rebate at \$110 off gas bills per year or \$121 for LPG per year
- Family Energy Rebate at up to \$180 off electricity bills per year
- Medical Energy Rebate at up to \$285 off electricity bills per year
- Life Support Rebate at up to \$1,343 off electricity bills per year (rates vary according to life support equipment)
- Seniors Energy Rebate at \$200 per year¹
- Energy Accounts Payment Assistance (EAPA) at up to \$300 off electricity bills twice per year and up to \$300 off gas bills twice per year, accessed during a short-term financial crisis.

As part of the 2019 election, the NSW Government committed to continue energy rebates for around 900,000 low-income households and families and introduced a new annual \$200 Seniors Energy Rebate for approximately 90,000 eligible self-funded retiree households. From 2019-20 the NSW Government allocated an additional \$41 million over four years for the new Senior Energy Rebate.

Due to the COVID-19 pandemic, the NSW Government allocated an additional \$5 million in 2019-20 and \$25 million in 2020-21 to the EAPA scheme. The NSW Government temporarily increased EAPA from \$300 to \$400 for both electricity and gas to support customers impacted by the COVID-19 pandemic.

This report summarises the Department of Planning and Environment's (Department) analysis of data provided by energy retailers under the NSW Social Programs for Energy Code for the period 1 July 2020 to 30 June 2021.

While this report covers periods of the COVID-19 pandemic, it is a generic report in consistent with the previous annual reports. The Department will issue a separate report dedicated to the COVID-19 pandemic covering data from January 2020 to June 2021.

About the data

The 2020-21 NSW Energy Rebates Annual Report was prepared using the following sources:

- Data reported by energy retailers under clause A5.14 of the NSW Social Programs for Energy Code (Version 6.0, 1 May 2019).
- Applications to the Department for 'on-supplied' energy rebates, EAPA scheme and the Family Energy Rebate.
- Data provided by Service NSW for the Seniors Energy Rebate.
- Department records on the number of residential gas connections in NSW.
- Data provided by the Australian Department of Human Services and Australian Department of Veteran Affairs on the number of households with at least one concession cardholder.
- Data from Australia Energy Regulator (AER)'s retail market performance reports on numbers of electricity and gas customers.

Quality statement

¹ Seniors Energy Rebate commenced from July 2019..

The estimated rebate value is within 1.0 per cent of the invoices received by the Department from retailers. The very small difference between the invoice payments occurs due to a mismatch between billing and reporting periods.

However, there are the following known quality issues with the data provided:

- Energy rebates' 'on-supplied' customers who receive more than one energy rebate type may be double-counted in total rebate recipient numbers. The impact of this is expected to be very small.
- A major uncertainty is the number of customers who switched their retailers during the reporting
 period. These switches resulted in a higher total count of customer IDs across all retailers than the
 number of unique customers. The Department has used quarter-slices of the data supplied by
 retailers, taking the highest of the four quarters to be the number of unique customers. This is an
 estimate in-line with the level of switch estimated in the AER's Retail Energy Market Performance
 reports.

In each reporting period, there were a small number of records from retailers containing errors. The Department is currently working with these retailers to improve their data quality in the future. In the July-December 2020 reporting period, the Department noticed the pattern of the data submitted by the retailers was more complex at billing level compared to pre-pandemic periods. As a result, the Department has adjusted the analysis procedure to better capture the pattern. This adjustment was applied to this report, and to a lesser extent, the July-December 2020 mid-year report. This adjustment has not been applied retrospectively and is presumed not to affect previous reports.

Due to the lack of late geographically based gas customer data 2019 estimates are used. This affects the accuracy of eligible gas customer estimates for Local Government Areas (LGAs). It will be revised once better data is made available.

The Department has also improved tariff-based calculation which has led to a better estimate of the annual bill and consumption of solar customers.

State-wide results

The Department estimates 914,000 unique customers received one or more of the Energy Social Programs in 2020-21, which is higher than the 878,000 estimated unique customers in 2019-20. Most of these customers accessed the Low Income Household Rebate (801,000 customers in 2020-21 compared to 785,000 in 2019-20) and the NSW Gas Rebate (286,000 customers compared to 247,000 in 2019-20), an increase of 2.0 per cent and 15.9 per cent from 2019-20, respectively.

Rebate eligibility and number of customers

Approximately 64 per cent of eligible customers accessed the Low Income Household Rebate, and 56 per cent of eligible customers accessed the NSW Gas Rebate. By comparison, 58 per cent and 49 per cent accessed the Low Income Household Rebate and Gas Rebate respectively in 2019-20. Around 11 per cent of eligible customers accessed the Family Energy Rebate, the same proportion as for 2019-20.

Tariff structure

Retailers offer a variety of tariff structures on both the market and standard offers. In 2020-21, there were around 76,000 energy rebate customer accounts on standard electricity offers and around 898,000 on market offers. Around 5,000 customers switched between standard and market offers, during this period within the same retailers. The fact that the proportion of market customers of 2020-21 is higher than that of 2019-20 suggests the number of switches from standard to market being higher than the switches from market to standard (Table 3). The estimated switching rate was about 0.5 per cent for rebate customers in 2020-21, compared to 1.4 per cent in 2019-20.

Most energy rebate customers pay a supply charge and a flat usage charge. The same unit charges apply for all electricity consumption for flat tariffs, regardless of how and when the electricity is used. The Department estimates that around 76 per cent of energy rebate customers are on flat tariffs, 8 per cent are on time-of-use tariffs, and 16 per cent are on solar tariffs. This structure is similar to broader market statistics reported by other bodies.

Energy rebate customers on solar tariffs on average save more than customers on flat tariffs. While it was expected that similar savings would apply to customers on time-of-use tariffs, the results show that bill savings are either lower or similar compared to customers on flat tariffs depending on network areas. This may indicate a lack of ability due to lifestyle or knowledge on how to maximise the benefit of time-of-use tariffs, such as running household appliances during off-peak times.

The Default Market Offer (DMO) or Reference Price rules were introduced in 2019-20, setting a price cap on what retailers can charge electricity consumers on standing offers. These rules were implemented to help consumers compare market offers more easily as retailers must now compare all their offers against the same base rate called the 'reference price' or 'reference bill'. This change likely led to energy bill reductions for rebates customers on standard offers. The analysis shows average electricity costs under standard offers across Ausgrid, Endeavour Energy and Essential Energy networks reduced by 2.7 per cent, 3.5 per cent and 1.2 per cent, respectively in 2020-21 relative to 2019-20 (Table 7). Comparatively, the same reduction was not seen in market offers, as the average rate in the Essential Energy network increased by about 2.5 per cent.

Electricity bills

Overall, annualised electricity bills decreased by around 4 per cent, 5 per cent and 6 per cent for Ausgrid, Endeavour Energy and Essential Energy networks respectively, and 5 per cent across the three networks combined, relative to 2019-20 (Table 7).

The average electricity bill for energy rebate customers on standard offers was around \$1,490 per year, compared to around \$1,560 for market offers. However, electricity consumption for standard offer customers was lower compared to that for market offer customers. If standard offer customers had consumed the same amount, they would have paid up to around \$100 more. Energy rebates reduced electricity bills by an average of 21 per cent and 20 per cent for standard and market offers respectively.

Gas bills

There were 14,000 energy rebate customer accounts on standard offers for gas compared to 288,000 on market offers in 2020-21. Around 1,000 customers switched between standard and market offers during the year. The switching rate of gas customers to market offers was around 0.5 per cent in 2020-21, less than the switching rate of 1 per cent in the 2019-20 financial year (Table 8).

The average annualised gas bill for standard offer customers in the Jemena area reduced by 6 per cent, for customers in the ActewAGL area by 4 per cent, for customers in the APA area by 5 per cent, and for customers in the Australian Gas Networks area reduced by 1 per cent between 2019-20 and 2020-21 periods.

Overall, the average gas bill for energy rebate customers on standard offers was around \$800 per year, compared to around \$760 for market offers, around \$40 less a year. Energy rebates reduced gas bills by an average of 15 per cent and 15 per cent for standard and market offers accordingly.

Disconnections

The Australian Energy Regulator (AER) introduced a Statement of Expectations (the Statement) during the COVID-19 pandemic which was in effect throughout 2020-21. The Statement identified principles that energy retailers are expected to adhere to if a region is subject to extended stay-at-home orders. Under the Statement, energy retailers must:

- offer a payment plan or hardship arrangement to residential and small business customers who indicate they may be in financial stress
- not disconnect any residential or small business consumers who may be in financial stress without their agreement.
- defer referrals of residential and small business consumers to debt collection agencies for recovery actions or credit default listing.

The Statement applied to specific Local Government Areas (LGAs) and automatically came into effect when an LGA was subject to stay-at-home orders that last for seven days or more. The standby Statement applied for 14 days after stay-at-home orders were lifted.

As a result of this, the number of disconnected electricity customers in 2020-21 significantly reduced compared to 2019-20 from 1,490 to around 980 in the Ausgrid area, from around 2,380 to 500 in the Essential Energy area, and from around 1,960 to 830 in the Endeavour Energy area. The average electricity bills for these disconnected customers was around \$2,440, \$1,960, and \$1,800 for Essential Energy, Endeavour Energy and Ausgrid respectively (Table 18).

The number of disconnected gas customers also significantly reduced compare to2019-20, from around 350 to 240 for Jemena, from around 150 to 10 for Australian Gas Networks, and from around 15 to zero for Central Ranges AGA Group. ActewAGL kept the disconnection numbers below 10 for both reporting years. The average gas bill for the disconnected customers were around \$900, \$1,250, and \$690 for Jemena, Australian Gas Network and ActewAGL respectively (Table 19).

Table 1 illustrates the number of customer accounts and unique customers receiving each of the available Energy Social Programs in 2020-21, the total and average amounts paid to customers, and the implied rate of customers switching retailers. In 2019-20, a total of around \$296,306,000 was paid to an estimated 914,000 unique customers. Each unique customer received an average of around \$320.

Table 2 illustrates the estimated number of eligible customers for the Low Income Household Rebate, NSW Gas Rebate, Family Energy Rebate and Seniors Energy Rebate alongside the estimated number of energy rebate customer accounts and proportion of unique customers relative to eligible customers. There were around 1,493,000 households eligible for the energy rebates and 828,000 customers received a rebate. This equates to 55 per cent of total eligible households that received a rebate.

Table 3 illustrates the number of energy rebate customer accounts as well as average annual bills forelectricity customers on standard and market offers. The average annual electricity bill was around \$1,550and average annual usage was around 4,840 kWh across both market and standard offers. The average

electricity cost across both the market and standard offers was around 32 cents per kWh. The percentage of rebate provided relative to electricity bill across both standard and market offers was around 20 per cent.

Table 4 illustrates the number of energy rebate customer accounts and average annual bills for gas customers on standard and market offers. The average annual gas bill was around \$760 and the average annual usage was around 19,600 MJ per year across both market and standard offers. The average gas cost across both the market and standard offers was around 4 cents per MJ. The percentage of rebates provided relative to gas bills across both standard and market offers was around 15 per cent.

| Rebate type | Number of customer accounts ¹ | Total paid amount ² (\$) | Average paid per customer account ³ (\$) | Assumed average rebate per unique customer (\$) | Estimated number of unique customers ^{4,5} | Implied rate of switching retailers ⁶ |
|---|---|--|---|---|---|---|
| Low Income Household Rebate | 943,000 | \$228,289,000 | \$242 | \$285 | 801,000 | 18% |
| NSW Gas Rebate ⁷ | 323,000 | \$31,474,000 | \$97 | \$110 | 286,000 | 13% |
| Family Energy Rebate (FER) | 47,000 | \$4,831,000 | \$103 | \$103 | 47,000 | n/a |
| Life Support Rebate | 56,000 | \$11,615,000 | \$207 | \$264 | 44,000 | 28% |
| Medical Energy Rebate | 7,000 | \$1,787,000 | \$253 | \$285 | 6,000 | 13% |
| Energy Accounts Payment Assistance (EAPA) Scheme | 49,000 | \$18,310,000 | \$373 | \$373 | 49,000 | n/a |
| Seniors Energy Rebate ⁸ | 25,000 | \$5,035,000 | \$200 | \$200 | 25,000 | n/a |
| Total | 1,034,000 | \$296,306,000 | \$286 | \$324 | 914,000 | 13% |

Table 1 Energy Social Programs customer numbers and rebate value in 2020-21

¹ Number of customer accounts may double count customers that switch from one retailer to another within 2020 July – 2021 June.

² These rebates estimates are based on retailer reporting information and do not necessarily match invoicing data.

³ Note this amount is less than the estimated rebate per household because of the portion of customers that switched retailers in 2020-21.

⁴ Number of unique customers for each rebate type is based on an assumed average rebate amount per customer. This is less than the number of customer accounts as customers that switch retailers appear as two customer accounts.

⁵ Total unique customers are the customer accounts with a bill in 2020-21 plus on-supplied customers, EAPA and FER customers from Departmental records. This is less than the total number of customer accounts as customers that switch retailers appear as two customer accounts

⁶ Customer accounts that switched is estimated by taking the difference between estimates for number of unique accounts and unique customers.

⁷ NSW Gas Rebate figures include natural gas and LPG.

⁸ Seniors Energy Rebate was introduced in July 2019

Table 2 Customer numbers and eligible households in 2020-21

| | Number of eligible | Number of | Customer | | Unique customers | Change from 2019-20 | | | | | |
|---|-------------------------|-----------------------------------|--|---|---|--|---|---|--|--|--|
| Rebate type | households ¹ | customer accounts ² | accounts relative to eligible households (%) | Unique customers that received a rebate (#) | relative to eligible households (%) | Unique customers that received a rebate (%) | Eligible customers ² (%) | Unique customers relative to eligible households (%) | | | |
| Low Income Household Rebate | 1,253,000 | 943,000 | 75% | 801,000 | 64% | 2% | -7% | 10% | | | |
| NSW Gas Rebate | 507,000 | 323,000 | 64% | 286,000 | 56% | 16% | 0% | 16% | | | |
| Family Energy Rebate | 423,000 | 47,000 | 11% | 47,000 | 11% | 1% | 2% | -1% | | | |
| Seniors Energy Rebate ³ | 95,000 | 25,000 | 26% | 25,000 | 26% | -10% | 0% | -10% | | | |
| Total across Low Income Household Rebate and Family Energy Rebate ⁴ | 1,493,000 | 962,000 | 64% | 820,000 | 55% | 2% | -6% | 9% | | | |

¹ Estimates based on data provided by Federal Department of Human Services, Department of Veterans Affairs and Australian Taxation Office.

² Number of customer accounts includes departmental data on the number of on-supplied and FER customers

³ Seniors Energy Rebate was introduced in July 2019

⁴ Total includes Low Income Household Rebates and Family Energy Rebates only and is less than the sum as some households receive both rebates

Table 3 Annualised electricity consumption and bills in 2020-21 by retail offer type¹

| Offer type | Number of | Average | Average | | | | | | | | | |
|--|--|--|---|--|---|---|--|--|-----------------------------------|------------------------------------|-------------------------------------|---|
| | Number of electricity customer accounts | Average annualised electricity bill (\$/yr) | Average electricity use (kWh/yr) | Average electricity cost (c/kWh) | Average annualised rebate ^{2,3} (\$) | Rebates relative to electricity bill (%) | Electricity customer accounts (%) | Average annualised electricity bill (%) | Average electricity use (%) | Average electricity cost (%) | Average annualised rebate (%) | Rebates relative to electricity bill (%) |
| Market offer only | 898,000 | \$1,555 | 4,874 | 31.9 | \$314 | 20.2% | 3% | -5% | -5% | -1% | 5% | 11% |
| Standard offer only | 76,000 | \$1,494 | 4,399 | 34.0 | \$319 | 21.4% | -6% | -6% | -3% | -3% | 5% | 11% |
| Customer accounts which switched between standard and market | 5,000 | \$1,813 | 5,391 | 33.6 | \$291 | 16.1% | -62% | 5% | 7% | -1% | -2% | -6% |
| Total from retailer reporting (excludes on supplied customers) | 974,000 | \$1,551 | 4,836 | 32.1 | \$315 | 20.3% | 1% | -5% | -4% | -1% | 5% | 11% |

¹ All data in this table is based on retailer reporting information and may not match results in other tables which have been supplemented with Departmental information

² When a customer switches energy retailer only a portion of their annual bill will appear in a retailer's reporting information. Most rebates (except EAPA and FER) are paid based on the daily so only part of a rebate will be captured. This metric inflates the rebate amount to represent a full year rebate amount to account for customers who switch retailers.

³ These figures do not include Energy Account Payment Assistance (EAPA) vouchers.

Table 4 Annualised gas consumption and bills in 2020-21 by retail offer type¹

¹ All data in this table is based on retailer reporting information and may not match results in other tables which have been supplemented with Departmental information.

² When a customer switches energy retailer only a portion of their annual bill will appear in a retailer's reporting information. Most rebates (except EAPA and Family Energy Rebate) are paid based on the daily so only part of a rebate will be captured. This metric inflates the rebate amount to represent a full year rebate amount to account for customers who switch retailers.

³ These figures do not include Energy Account Payment Assistance (EAPA) vouchers.

Electricity and gas changes in 2020-21

This section compares the state-wide results for 2020-21 and 2019-20for both electricity and gas.

Overall, the total number of customer accounts increased by 4 per cent in 2020-21 compared to 2019-20 (**Figure 1**). Low Income Household Rebate customers increased by 2 per cent relative to 2019-20. The highest increase was observed in the Gas Rebate (15.9 per cent), followed by Low Income Household Rebate (10.6 per cent) and Medical Energy Rebate (3.2 per cent).

For EAPA, there is an adjustment to the reported sum of unique electricity and gas accounts in the 2019-20 Annual Report. An improvement in the Department's systems refined the identification of unique EAPA customers that hold both gas and electricity accounts. As such, Figure 1 adjusts the 2019-20 number of unique accounts from 50,000 to 47,000 reported in 2019-20. With the adjustment in 2019-20, there is an increase in unique customer accounts that received EAPA of 3 per cent in 2020-21 relative to 2019-20. From 2020-21 onwards, this refinement will be reflected in the number of unique customer accounts reported.

Figure 2 presents a comparison of the rate of customer switching from standard to market offers across various rebates types. Switching rates for Low Income Household Rebate, Gas Rebate, Life Support Rebate and Medical Energy Rebate customers have all reduced relative to 2019-20, with the Gas Rebate experiencing the highest reduction (-43 per cent).

The number of households eligible for the Low Income Household Rebate has decreased by 7.8 per cent relative to the 2019-20 reporting period which saw a surge in eligibility because of the Commonwealth Government's COVID-19 JobSeeker scheme. The numbers of eligible customers for the Gas Rebate and Family Energy Rebate are similar to those of 2019-20 (Figure 3).

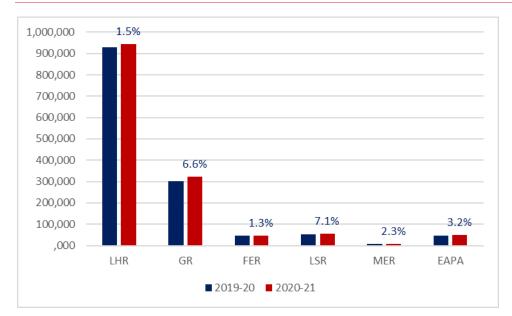

The uptake rates of the Low Income Household Rebate, Gas Rebate and Family Energy Rebate have all increased, and Low Income Household Rebate had the highest increase by 7.8 per cent (Figure 4).

Figure 5 illustrates a comparison of the number of electricity accounts for market and standard offer types. A reduction of 6.3 per cent was observed for standard, and an increase of 3.0 per cent for market offers in 2020-21 compared to 2019-20.

Figure 6 and **Figure 7** illustrate the average annualised electricity bills and consumption. The results indicate that the average electricity bill has reduced by 5.1 per cent and 5.9 per cent for market and standard offers respectively. In addition, the annualised average electricity consumption reduced by 4.6 per cent for market offer customers, and by 3.5 per cent for standard offer customers in 2020-21 relative to 2019-20. The average electricity cost per kWh decreased by 4.6 per cent and 3.5 per cent for market and standard offers in 2020-21 respective to 2019-20, respectively (Figure 8).

Figure 9 illustrates the comparison of the number of gas accounts for market and standard offer types. A reduction of 4.8 per cent was observed for standard offers and an increase of 7.9 per cent for market offers in 2020-21 compared to 2019-20.

Figure 10 and **Figure 11** illustrates the average annualised gas bills and consumption. The results show that the average gas bill for both market offers and standard offers has reduced by 1.3 per cent relative to 2019-20. At the same time, the annualised average gas consumption went down by 0.2 per cent for standard offer customers, and by 4.1 per cent for market offer customers in 2020-21. The average gas costs per MJ for market offer and standard offer have reduced by 5.6 per cent and 4.4 per cent respectively, in 2020-21 relative to 2019-20(Figure 12).

Energy network area results

Ausgrid and Endeavour Energy mostly serve electricity customers in the Greater Metropolitan Region. Essential Energy serves most regional electricity customers. Jemena is the main distribution network for gas covering much of the Greater Metropolitan Region and Central West NSW. Other gas networks are much smaller and located in South and North-East NSW.

The retailer reporting information implies that in 2020-21, up to 39 per cent of electricity customer accounts in the Essential Energy network area received a rebate compared to 32 per cent in the Endeavour Energy and 24 per cent in the Ausgrid network areas. Essential Energy customers make up 30 per cent of energy rebate electricity customer accounts but only 22 per cent of all NSW residential electricity customers.

The retailer reporting information indicates around 8.3 per cent of customer accounts in the Essential Energy network area (excluding those in 'on-supplied' arrangements) had standard offers in 2020-21, which is only slightly higher than both Ausgrid and Endeavour Energy areas during the same period (8.1 per cent).

The retailer reporting information shows around 21 per cent of gas customer accounts in the Jemena network areas receive the NSW Gas Rebate, compared to around 19 per cent of ActewAGL customers, 27 per cent of Australian Pipeline Association (Central Ranges) customers and around 33 per cent of Australian Gas Networks customers. In the ActewAGL network area, customer accounts on standard offers are significantly higher (at 34 per cent) than the remainder of NSW (4 per cent in Jemena, 12 per cent in Central Ranges and 8 per cent in Australian Gas Networks).

Table 5 illustrates the number of retailer-supplied electricity customer accounts receiving energy rebates in each of the electricity network service areas as well as the percentage of customer accounts receiving a rebate relative to total customers. A total of 974,000 electricity customer accounts across all networks received a rebate, while a total number of 3,336,000 residential customer accounts were reported in the AER 2020-21 Annual Retail Market Report. This equates to 29 per cent of rebate customer accounts relative to total residential customers.

Table 6 illustrates the number of retailer-supplied gas customer accounts receiving a rebate in 2020-21 as well as the percentage of customer accounts receiving a rebate relative to total customers. A total of 302,000 gas customer accounts across all gas networks received a rebate while a total of 1,464,000 residential customer accounts were reported in AER Annual 2020-21 Retail Market Report. This equates to 21 per cent of rebate customer accounts relative to total residential customers.

Table 7 represents the electricity bill and use by network area by customer accounts on standard and market offer types. The average annual electricity bill for standard and market offers were \$1,499 and \$1,555 respectively. The average electricity use for standard and market offers were 4,416 kWh/year and 4,873 kWh/year respectively. The average electricity cost for standard and market offers were 34.0 cents per kWh and 31.9 cents per kWh respectively. The percentage of rebate provided relative to electricity bill for standard and market offers were around 21 per cent and 20 per cent respectively.

Table 8 illustrates the gas bill and use by network area by customer accounts on standard and market offer types. The average annual gas bill for standard and market offers were \$801 and \$760 respectively. The average gas use for standard and market offers were 18,676 MJ/year and 19,635 MJ/year respectively. The average gas cost for standard and market offers were 4.3 cents per MJ and 3.9 cents per MJ respectively. The percentage of rebate provided relative to gas bill for standard and market offers were around 15 per cent and 15 per cent respectively.

Table 9 illustrates the distribution of customer numbers by electricity consumption buckets by offer type and electricity network during 2018-19 and 2020-21 periods. Table 10 shows the distribution of customer numbers by annualised electricity bill buckets by offer type and electricity networks. Majority of electricity customers fall under 2,000 - 4,000 kWh/year and \$1,000 - \$1,500 annualised buckets respectively.

Table 11 represents the distribution customer numbers by gas consumption buckets by offer type and gas network during 2018-19 and 2020-21 periods. Table 12 shows the distribution of customer numbers by annualised gas bill buckets by offer type and gas networks. The majority of gas customers fall under 5,000-15,000 MJ/year and \$400 - \$800 annualised buckets respectively.

Table 5 Rebate uptake in 2020-21 by electricity network

| Electricity network | Number of electricity customer accounts ¹ | Number of residential customers | Rebate customer accounts relative to total residential customers (%) |
|----------------------|---|---------------------------------|--|
| Ausgrid ² | 378,000 | 1,603,000 | 24% |
| Endeavour Energy | 307,000 | 956,000 | 32% |
| Essential Energy | 290,000 | 776,000 | 37% |
| Total ³ | 974,000 | 3,336,000 | 29% |

Table 6 Rebate uptake in 2020-21 by gas network

| Gas network | Number of customer accounts receiving a gas rebate ⁴ | Number of residential customers in | Customer accounts receiving a rebate relative to total customers (%) |
|--------------------------------------|---|------------------------------------|--|
| Jemena ⁵ | 278,000 | 1,380,000 | 20% |

| | Standard | 80,000 | \$1,499 | 4,416 | 34.0 | \$319 | 21.3% |
| Total | Market | 900,000 | \$1,555 | 4,873 | 31.9 | \$314 | 20.2% |
| | Total from retailer reporting ⁴ | 974,000 | \$1,551 | 4,836 | 32.1 | \$315 | 20.3% |

¹ Offer type refers to customer accounts on standard or market offers at any time in 2020-21.

² When a customer switches energy retailer only a portion of their annual bill will appear in a retailer's reporting information. Most rebates (except EAPA and FER) are paid based on the daily rate so only part of a rebate will be captured. This metric inflates the rebate amount to represent a full year rebate amount to account for customers who switch retailers.

³ These figures do not include Energy Account Payment Assistance (EAPA) vouchers.

^{4 &}quot;Total from retailer reporting" only counts customer accounts receiving a rebate that appear in retailer reporting information.

Table 8 Gas consumption and bills in 2020-21 by retail offer type and gas network

| Gas network | Offer type | Number of customer accounts receiving a rebate | Average annualised gas bill (\$/yr) | Average gas use (MJ/yr) | Average gas cost (c/MJ) | Average annualised rebate ^{1,2} (\$) | Rebate relative to bill (%) |

Table 9 Distribution of electricity consumption by offer type and electricity network

Offer type refers to customer accounts on standard or Market offers at any time in the reporting period.
 Total customer accounts only count customer accounts receiving a rebate that appear in retailer reporting information.
 Customer accounts whose consumptions were outside the range (0-20000) were removed as outliers

¹ Offer type refers to customer accounts on standard or Market offers at any time in the reporting period. 2 Total customer accounts only count customer accounts receiving a rebate that appear in retailer reporting information. 3 Customer accounts whose bills were outside the range (\$0-\$4000) were removed as outliers.

Energy tariffs in 2020-21

The Department started collecting new information from retailers including peak, off-peak, shoulder, and controlled load units and charges, as well as solar energy units and credits for bills pertaining to July 2019 onwards.

Flat tariffs

The results show that 411,000 rebate customers were on a flat tariff (41 per cent of total rebate customers) and 339,000 customers were on a flat tariff with controlled load (34 per cent of total rebate customers) in 2020-21 (Table 13).

For customers on a flat tariff with controlled load, the average annual electricity bill was about \$300 higher and average annual consumption was about 2,000 kWh higher compared to customers on a flat tariff without controlled load. Average electricity costs were lower for customers on a flat tariff with a controlled load by about 5 cents per kWh. The proportion of the rebate to electricity bill was higher by 4 per cent for a flat tariff without controlled load compared to a flat tariff with controlled load. The average annual discount was slightly higher for the flat tariff with a controlled load compared to flat tariff without controlled load.

Time of Use (ToU) tariffs

The rebates data shows that 50,000 customers were on ToU (5 per cent of total rebates customers) compared to 31,000 on ToU with Controlled Load (3.1 per cent of total rebates customers).

For customers on a ToU tariff with controlled load, the average annual electricity bill was about \$400 higher and average annual consumption was 2,600 kWh higher compared to customers on a ToU tariff without controlled load. Electricity costs were lower for customers on a ToU tariff with controlled load by about 5 cents per kWh. The proportion of the rebate to electricity bill was higher by 4 per cent for the ToU tariff without controlled load compared to ToU tariff with controlled load. The average annual discount was almost the same as the ToU tariff with controlled load compared to ToU tariff with controlled load.

Solar tariffs

A total of 159,000 rebates customers were reported to have rooftop solar panels, which is around 16 per cent of total rebates customers.

A total of 58,000 rebates customers were on a flat tariff with controlled load and solar (5.8 per cent of total rebates customers) followed by 51,000 customers on a flat tariff with solar (5.1 per cent of total rebates customers), 25,000 customers on a ToU tariff with controlled load and solar (2.5 per cent of total rebates customers, and 25,000 customers on a TOU tariff with solar (2.5 per cent of total rebates customers).

Solar customers appeared to consume 36 per cent less grid energy than customers on a flat tariff without solar. However, due to fixed supply charges the annualised electricity bill for solar customers was only 6 per cent lower than customers on a flat tariff without solar (Table 13). The annualised consumption estimate for solar customers is not comparable to the reported 2019-20 data because of an improvement in the Department's analytical method.

Figure 18 to Figure 21 show scatterplots for various tariffs and regression lines including differences between networks.

Table 13 Average Annual electricity consumption and bills by Tariff plan reported in FY2020-21

| Tariff type | Number of electricity customer accounts ¹ | Average annualised electricity bill (\$/yr) | Average annualised electricity use (kWh/yr) | Average electricity cost (c/kWh) | Average annual rebate (\$) | Rebates relative to electricity bill (%) | % of customer on total rebate population | Average Annualised Discount | Average Annualised Solar Export (kWh/yr) | Average Solar Feed-in Tariff (c/kWh) |

¹ Adding these will be more than the total rebate customers in Table 1. This is because this table includes switching customers between offer types and tariff types.

² Tariffs are mutually exclusive of each other.

³ Total number of Solar customers. The subtotal of solar is provided in the next four rows.

⁴ Adding this will add up to total Solar customers.

NSW Energy Rebates Annual Report

Local Government Area results

This section provides a snapshot of selected results for some Local Government Areas (LGAs) in NSW. Appendix A and Appendix B provide detailed results by LGA. Appendix C summarises State Electoral District level statistics.

Table 14 shows the Central Coast had the highest number of customer accounts accessing rebates with approximately 59,000 customer accounts receiving rebates totalling around \$18.6 million. Other areas with large numbers of customer accounts and rebate value include Canterbury-Bankstown, Blacktown, Lake Macquarie, Fairfield, Wollongong, Liverpool, Cumberland, Penrith and Mid-Coast.

Brewarrina had the lowest number of customer accounts accessing a rebate with 260 customer accounts receiving around \$61,000 in rebates (including EAPA vouchers). Other areas with small numbers of customer accounts include Balranald, Central Darling, Carrathool, Bourke, Bogan, Hay, Warren, Walcha and Lockhart.

Table 15 shows Berrigan had the highest proportion of customer accounts on market offers for electricity at 96 per cent, and Table 16 shows Hawkesbury had the highest proportion of customer accounts on market offers for gas at 98 per cent. Maitland, Camden, Singleton, and Cessnock were also in the top 10 LGAs for customer accounts on market offers for both electricity and gas.

Central Darling had the lowest proportion of customer accounts on market offers for electricity at 84 per cent. Other areas with a low proportion of market offers for electricity were Queanbeyan-Palerang Regional, Tenterfield, Brewarrina, Upper Lachlan Shire, Goulburn Mulwaree, Hilltops, Broken Hill, Yass Valley, and Cobar.

Shoalhaven had the lowest proportion of customer accounts on market offers for gas at 63 per cent. Other areas with low proportions of customer accounts on market offers for gas were Queanbeyan-Palerang Regional, Goulburn Mulwaree, Hilltops, Wagga Wagga, Tamworth Regional, Albury, Inner West, Sydney, and Waverley.

Table 17 shows Federation has the highest Low-Income Household Rebate uptake rate (based on the proportion of eligible customers) with estimates that 91 per cent of eligible customers accessed a rebate.

Walgett was the LGA with the lowest uptake, with around 49 per cent of eligible households taking up the Low Income Household Rebate. Other LGAs with low uptake were Byron, Bourke, Strathfield, Woollahra, Burwood, Central Darling, Brewarrina, Inner West, and Sydney.

| Shoalhaven | 85% | | | | | | |
| Berrigan | 85% | | | | | | |

| Bottom ten Local Government Areas | | | | | | | | |
|-----------------------------------|--|--|--|--|--|--|--|--|
| Local Government Area | Ratio of LIHR customer accounts to eligible households (%) | | | | | | | |
| Walgett | 49% | | | | | | | |
| Byron | 60% | | | | | | | |
| Bourke | 61% | | | | | | | |
| Strathfield | 61% | | | | | | | |
| Woollahra | 65% | | | | | | | |
| Burwood | 65% | | | | | | | |
| Central Darling | 65% | | | | | | | |
| Brewarrina | 66% | | | | | | | |
| Inner West | 66% | | | | | | | |
| Sydney | 66% | | | | | | | |

¹ LIHR customer accounts-to-eligible uptake rate denotes customer accounts that received the Low Income Household Rebate relative to the number of eligible customers (%). Customer accounts are more than the number of unique customers as it double counts those customers that switched retailers in 2019-20.

Disconnections

This section provides a summary of disconnections in 2020-21.

Table 18 shows the estimated average annual electricity consumption and bills for disconnected customers. According to the results, disconnected customers consumed an average of 6,932 kWh per year, which is higher than the average for rebate customers (at 4,800 kWh) and for all residential customers in NSW (at 5,172 kWh). The bill savings from energy rebates (23 per cent) is higher for disconnected customers than all rebate customers (18 per cent).

Around 2,300 electricity rebate customers were disconnected in 2020-21, a significant reduction from around 6,800 in 2019-20. An estimated 25 per cent of them were reconnected within a day during this period. Around 12 per cent of disconnected customers had either a payment plan or a hardship plan.

The average overdue amount for disconnected electricity rebate customers was \$1,800, comparing to around \$1,500 in 2019-20.

Table 19 shows the estimated average annual gas consumption for disconnected customers is 24,700 MJ, which is higher than the average consumption of 19,500 MJ across all rebate customers.

Around 550 gas rebate customers were disconnected in 2019-20 and an estimated 9 per cent of them reconnected within the same day during this period. Around 8 per cent of disconnected customers had either a payment plan or a hardship plan. The average overdue amount for disconnected gas rebate customers was \$1,645.

Table 18 Electricity customer accounts disconnected for any reason in 2020-21¹

| Electricity network | Disconnected customer accounts | Customer accounts on payment or hardship plan ² | Customer accounts disconnected relative to total rebate customer accounts (per cent) | Customer accounts reconnected within a day of disconnection | Average overdue amount when disconnected (\$) | Average annualised electricity use (kWh/yr) | Average annualised electricity bill (\$/yr) | Rebates relative to bill (per cent) |
|------------------------|--------------------------------------|---|---|---|--|---|--|---|
| Ausgrid | 979 | 120 | 0.26 per cent | 291 | \$1,531 | 6,252 | \$1,807 | 28 per cent |

⁴ Whether in the 12 months prior to disconnection the customer had been on the retailer's hardship or payment plan.

Glossary

| Field | Definition |
|--|--|
| Customer account | Customer account refers to a unique record of a customer with a retailer (or on-supplied customers). This metric will double count those households that |
| Customer accounts-to-eligible uptake | switch from one retailer to another within the financial year. Customer accounts that received the rebate relative to the number of |
| Electricity (kWh) | eligible customers (per cent). Electricity consumption by customer account. Where a customer account does not have bills covering the entire year, the Department has annualised |
| | the consumption based on the number of days for which billing information is available. |
| Electricity bill | Electricity bill in this report refers to the annual billed amount paid by customer accounts after rebates have been deducted. Gas bill in this report refers to the annual billed amount (i.e. the sum of monthly or quarterly bills) paid by customer accounts after rebates have been deducted. Where a |
| | customer account does not have bills covering the entire year, the Department has annualised the bill based on the number of days for which billing information is available. |
| Energy Accounts Payment Assistance (EAPA) Scheme | The Energy Accounts Payment Assistance (EAPA) Scheme helps people experiencing a short-term financial crisis or emergency to pay their electricity or gas bill. |
| Family Energy Rebate | The Family Energy Rebate helps NSW family households with dependent children who have received the Family Tax Benefit payment from the Federal Department of Human Services. |
| Gas bill | Gas bill in this report refers to the annual billed amount (i.e. the sum of monthly or quarterly natural gas bills, including LPG) paid by customer accounts after rebates have been deducted. Where a customer account does not have bills covering the entire year, the Department has annualised the bill based on the number of days billing information is available. |
| Hardship plan | A retailer's hardship program which helps a customer with financial difficulty. Whether the customer had received a hardship plan in the twelve months before disconnection. |
| Life Support Rebate | The Life Support Rebate assists customers to pay their electricity bills if the are required, or have someone living with them who is required, to use approved energy-intensive equipment at home. |
| Low Income Household Rebate | The Low Income Household Rebate assists customers who hold eligible concession cards issued by the Federal Department of Human Services or the Department of Veterans' Affairs. |
| Market offer | The retailers set the prices under market offer contracts. The terms and conditions of these contracts must adhere to minimum requirements governed by law. However, retailers and customers can choose to negotiate all other terms and conditions of the contract. |
| Medical Energy Rebate | The Medical Energy Rebate assists customers who cannot self-regulate body temperature when exposed to extremes (hot or cold) of environmental temperatures. |
| Natural Gas (MJ) | Gas consumption by customer account. Where a customer account does not have bills covering the entire year, the Department has annualised the consumption based on the number of days billing information is available. |
| NSW Gas Rebate | The NSW Gas Rebate helps eligible NSW households pay their natural gas bills. From 1 July 2016, this rebate will also be available to eligible households that rely on LPG for their basic needs. |
| On-supplied | On-supplied refers to customers that apply for rebates directly to the Department because they are not a direct energy account holder (e.g. households that live in a caravan park that pay the park owner for electricity). |
| Payment plan | A retailer's payment arrangement plan which helps a customer pay the energy bills in affordable instalments. Whether the customer had received payment arrangements in the twelve months before disconnection. |
| Postcode | Postcode for the supply address for the National Meter Identifier associated with each bill associated with each customer account (site address). |
| Reporting period | According to the NSW Social Programs for Energy Code, retailers are required to submit rebate billing data to the Department every six months since July 2017. This report package only covers the information from July 2018 to June 2019 (2018/19). This report compares 2018/19 data with data from July 2017 to June 2018 (2017/18), which gives a holistic view of the rebate program over time. |
| Seniors Energy Rebate | The Seniors Energy Rebate assists customers who hold a valid Seniors Health Card issued by the Federal Department of Human Services or the Department of Veterans' Affairs. This rebate commenced on 1 July 2019. |

| Field | Definition |
|-----------------|---|
| Standard offer | The terms and conditions of standard offer contracts are regulated by law. Retailers cannot change the terms and conditions. The retailers set the prices under standard offer and cannot change more frequently than once every six months. |
| Unique customer | Unique customer is an attempt to estimate the number of rebate customers after accounting for those customers that switch from one retailer to another within the financial year. |

¹ Where less than 10 customer accounts appear in an LGA we have removed the number of customer accounts and rebate amounts.

² NSW Gas Rebate figures includes natural gas and LPG.

³ Total number of customers is less than the sum of customers receiving each rebate as some customers receive multiple rebate types.

¹ Average costs of electricity and gas are based on consumption and total bill amounts reported by energy retailers (i.e. they include both usage and service charges).

² Gas figures have been marked as n/a where there are less than 100 customer accounts in an LGA in the retailer reporting information. 3 Based on the number of distinct customer accounts on market offers relative to the total number of customer accounts for electricity or gas.

⁴ LIHR uptake rate means customer accounts that received the Low Income Household Rebate relative to the number of eligible customers (%).

⁵ Gas rebate uptake rate means customer accounts that received the Gas Rebate relative to the number of eligible customers (%).

| Local Government Area | Average cost of electricity ¹ (c/kWh) | Average cost of gas ² (c/MJ) | Customer accounts on market offers for electricity ³ (%) | Customer accounts on market offers for gas ^{2,3} (%) | Low Income Household Rebate uptake rate (%) ⁴ | Gas Rebate uptake rate (%) ⁵ |

¹ Estimates based on data provided by Federal Department of Human Services, Department of Veterans Affairs and Australian Taxation Office.

² LIHR uptake rate means customer accounts that received the Low Income Household Rebate relative to the number of eligible customers (%).

³ Gas rebate uptake rate means customer accounts that received the Gas Rebate relative to the number of eligible customers (%).

⁴ Total number of customer accounts is the unique customer accounts receiving one or more rebate types.

⁵ These rebates estimates are based on retailer reporting information and Departmental records for on-supplied customer applications.
