EES ECCS Electricity Infrastructure Roadmap Mailbox

Electricity Infrastructure Investment Safeguard Policy Paper (Part 6 of the EII Act)

Electricity Infrastructure Fund Policy Paper (Part 7 of the EII Act) Consultation
Submission Objection.

As the NSW Government's plan to transform our electricity sector through The Electricity Infrastructure Roadmap is to be one that is affordable, clean & reliable - this is a complete failure in every aspect.

There is no system reliability with inferior, intermittent wind & solar sources.

Security risks & cyber security risks are extreme & inevitable. This transition is a national security threat - plugging us into the State Grid Corporation of China through Project Energy Connect with unbalanced, undue influence from Spark Renewables/Rick Francis & predominantly shonky, off-shore, subsidy hungry developers.

Efficient costs for electricity consumers - consumer financial interest is to be the primary factor that the Consumer Trustee is to consider, in the long term financial interests of NSW electricity consumers.

There have been no costings released, discussed in Parliament or even seen by NSW Treasury regarding this diabolical, astronomically costly Roadmap & farce of a process.

There is a total lack of transparency from Energy Co NSW with no community representation at all.

The Roadmap is a fudged process transferring wealth to Matt Kean's cabal, benefiting developers, lobbyists, promoters, billionaire investors & ripping off everyday electricity consumers.

This is inappropriate or illegal conduct by employees or third parties.

Consumers will be paying increased electricity prices - subsidising developers & slugged with massive Interconnector blow outs.

Large-scale PV Solar/Wind/Battery energy provision is not at all clean. To the contrary, it is all based on highly extractive, energy intensive, toxic polluting, potent green house gas leaking (SF6 etc.,) massive toxic waste creating & unethically sourced, insecure energy.

The Consumer Trustee's strategic objectives under the EII Act will never be realised.

Meeting community standards & regulatory requirements in relation to good corporate governance is impossible with this scandalous, fraudulent scam.

There is a ground swell of community discontent with infrastructure projects throughout NSW.

There is no social licence whatsoever - the community is being completely duped, disregarded & unjustly treated - forced to endure the disgusting ruination of their rural landscapes with ugly, irritating Wind Turbine monstrosities & the negligent contamination of Australia's vital water sources, our irreplaceable soil - our essential food bowls - with heavy-metal leachate from mass Solar & toxic lithium batteries - also forcing extensive, increased fire risks onto rural communities.

Stop sabotaging Australia with your cruel, out of control transition madness!

Yours Sincerely,
