Subject: [REDACTED] - Tranche Two Issues Paper Submission

The NSW Government's diabolical renewable energy plans are being designed to sabotage our irreplaceable, uncontaminated food producing land, devastate our ecologically sustainable rural communities, cobble our manufacturing & industry, eliminate our economical, reliable baseload power supply, detrimentally impact our NSW/Australian economy & seriously threaten our national security - selling us out to Chinese energy control.

There is nothing positive for NSW/Australia whatsoever in this fudged, electricity goat track which has shockingly never even had it's modelling seen by the NSW Treasury!

The DPIE Electricity Roadmap has been designed by incompetent, anti-Australian public servants, along with MP's, Liberal Moderate power brokers & lobbyists who are siphoning off squillions of \$'s of taxpayer funded subsidies for their own monetary & position benefits.

This Electricity Roadmap is a copy of Beijing's Blueprint & totally against the public interest & Australia's interest.
